

Cloud Optimize

If you are looking to maximize your cloud investment for cost and performance, then consider a Cloud Optimize workshop. Woolpert Digital Innovations combines customized efficiency investigations with hands-on instruction to help customers optimize their Cloud spend.

Every Cloud Optimize workshop begins with an initial customer questionnaire focused on the optimization effort. Then, our Cloud engineers facilitate an interactive discussion and review of relevant artifacts such as configurations, code and policies. This collaborative effort culminates in a document identifying and prioritizing areas for optimization with a detailed implementation plan. During the remaining workshop time, the Woolpert Digital Innovations and customer team will begin addressing the prioritized list of optimization opportunities. Any areas that cannot be addressed during the scheduled time will be planned out for future deployment.

KEY ACTIVITIES

Scoping

As optimization is open-ended, we gather information from the client so that discovery and investigation are focused and efficient.

Discovery

Woolpert Digital Innovations holds a discovery workshop over a maximum of eight hours. During this session, our consultants and client staff (e.g., business owners, system architects, information security professionals, software engineers) explore service usage patterns, system architecture, and cost.

Investigation

As we discover more about the client's setup and key concerns, we investigate potential optimizations. Woolpert Digital Innovations may ask for access to client resources on GCP (e.g., IAM configuration, billing data, quotas and logs) in order to make recommendations.

Optimization Report

Our team then summarizes findings, identifies potential optimizations and suggests next steps. At that time, Woolpert Digital Innovations may be able to implement some optimizations with the client's permission. Otherwise, we will provide recommendations for the next step.

INFORMATION

Prerequisites

- Completed client questionnaire
- Usage data for client's cloud IaaS, PaaS or SaaS offerings

Deliverables

- Pre-workshop questionnaire
- Discovery workshop with Woolpert Digital Innovations and the client
- Identify optimization opportunities as time permits
- Optimization summary report
- Health check report card scored on structure, security, accuracy and efficiency
- Schedule reassessment appointment

Scope and Pricing

- Maximum of eight hours within one week (location TBD)
- Price to be agreed upon by client and Woolpert Digital Innovations
